

Design-and-build *Platforms*

Today's point-of-sale (POS) terminals integrate keyboards, scanners, drawers, printers, displays, and magnetic stripe card readers into complex computer-driven systems that must satisfy unique retail requirements.

The demand for integrated solutions has launched **NRT** into manufacturing hardware-compatible platforms, which allow components to fit into stylish and operationally effective design-and-build POS terminals.

Key to this concept are the **NRT POS platforms**, or POS shoes, which are custom-designed for each client to integrate the chosen components.

Key Features

- ✓ A finished, attractive, store-complimentary appearance to all POS terminals
- ✓ Cable management issues are eliminated
- ✓ Wide selection of components to fit any requirements or budget
- ✓ Easily upgradeable
- ✓ Software choices remain independent
