Reporting to the Software Development- Team Lead, the **IT Software Developer's** primary mandate is to perform a variety of software project development. Other primary responsibilities include: designing of stress and scalability testing infrastructure for internal product quality controls, and providing software support and maintenance to all installation engineers and customers.

As part of an integral team developing the IT initiatives and projects of our organization, the **IT Software Developer** is expected to:

- Perform daily task assignments according to self-initiatives and set-priorities
- Conduct sub-system/modular analysis and implementation
- Generate QA specifications and conduct stress and scalability tests
- Document test plans and strategies
- Review software codes and functionalities, analysis, and troubleshooting
- Follow through customers' business requirement definitions
- Design programming reference materials
- Other tasks as assigned by the managers

Job Requirements

Education and Training

- Bachelors Degree/Equivalent Experience
- Individual with Master's Degree is preferred.

Technical Requirements

- Proficient in C/C++, WIN32 APIs, concurrency, and socket programming
- Sound knowledge of TCP/IP, SSL/XML/HTTPS, and X.509 certificate.
- Proficient Java/J2EE, JavaScript programming and related skills.
- Strong developing skill on SQL/Oracle database.
- UNIX (AIX, HP-UX) environment development experience is a plus.

Experience

- Previous experience in large-scale software developing is a prerequisite.
